

For Immediate Release:

Plews & Edelmann Introduces Specialized Tool Kit That Makes Electric Power Steering Repairs Safer and More Precise

- *Purpose-built Chamfer Ring Spanner Wrench Kit enables safe removal of internal steering components*
- *Innovative design prevents damage to sensitive EPS components during repair*

(DIXON, IL – November 1, 2024) — Plews & Edelmann® has unveiled its new Edelmann® Chamfer Ring Spanner Wrench Kit, a specialized tool that transforms how technicians service electric power steering (EPS) systems. The innovative kit, featured in the New Product Showcase at AAPEX, addresses a critical safety and precision challenge in EPS rack and pinion repairs.

The proprietary tool kit is specifically engineered to safely remove and reinstall chamfer rings inside EPS rack and pinion housings. Due to the unique positioning of these rings and their specialized tooth patterns, conventional spanner wrenches prove ineffective. Without proper tools, technicians often resort to alternative methods that risk damaging sensitive components.

"This specialized tool kit eliminates alternative practices of using improvised tools to service EPS racks," said Anthony Holguin, Director of Category Management at Plews & Edelmann. "More importantly, it allows technicians to verify proper torque specifications during reassembly, ensuring the long-term reliability of the repair."

The Chamfer Ring Spanner Wrench Kit enables technicians to fully separate the rack body for belt replacement while protecting the integrity of internal components. This precise approach not only makes repairs safer but also helps ensure the restored system performs to original specifications.

"By developing these specialized tools, we're giving technicians the ability to perform EPS repairs with confidence," added Holguin. "The precision and safety features built into these tools reflect our commitment to providing professional-grade solutions for modern vehicle repairs."

AAPEX attendees can see live demonstrations of proper chamfer ring removal and installation techniques at booth J8233, with daily tool kit giveaways for attendees. Additional product information will be available at the company's main booth A4245.

For more information about the Chamfer Ring Spanner Wrench Kit or to find specific vehicle applications, visit www.plews-edelmann.com/eps or call 800-770-4639.
